Ana Maria Mihalcea, MD, PhD | Humanity United Now | anamihalceamdphd.substack.com

This is an interesting find in the declassified library of the CIA - why would these writings be classified in the first place? They explain how the futurists predict and create the future by dreaming it into being. As we see our world transformed by technocratic transhumanism and many people are incredulous as to the technological advancements that form the infrastructure of global 4th Industrial Revolution, it is important to understand this long term planning strategy.

CIA Vision of the Future

First, technocrats embrace Marxist ideology as we have seen in to the extreme during the Biden administration. But beyond that, the next step consists clearly of an electromagnetic control grid as seen in all the illustrations as a radiating 5G tower.

Multinational corporations flourish in wealth, while the population is shown as submissive, either in mind control rehabilitation camps like in China, or via UN military paroling the streets of cities, while the population is visualized as half naked slaves who bow to the oversized larger than life techno aristocrats. Of course, depopulation is part of their picture, as outlined below - and of course diseases, hunger and war are all artificially created.

Inject the population with COVID19 biological weapons of mass destruction, kill all birds and vaccinate all animals with more of the same biological weapons, spray toxic chemicals from the air and create fake conflicts and forever wars where someone son's and daughters get killed, not to speak of the weather warfare that initiates earthquakes, deluges, droughts, volcanic eruptions at will.

This is how they manifest their "dreams".

Thomas Malthus predicted that humanity will breed until its teeming millions die off from war, disease, and hunger. The rapid increase of world population in the 20th century has given great credibility to his gloomy vision.

Illustration: Kathy Sanderson

The modality of seeing the future in retrospect is a classical way of manifestation - these people know occult knowledge.

CONTENTS

5 **Introduction—Welcome to the Future!**

Part 1: The Future as History

The past can illuminate the future.

9 **Smith, Marx, and Malthus: Ghosts Who Haunt Our Future**
by James H. Weaver and Jon D. Wisman
Three economic visions of tomorrow's world.

20 **You Will Think This a Dream**
by Charles P. Steinmetz
A 1915 vision of the future.

24 **On Charles P. Steinmetz as a Prophet**
by Joseph P. Martino
A modern forecaster rates his predecessor.

25 **The Future in Retrospect**
by Robert W. Prehoda
A review of a Nobel prize winner's 1955 forecasts.

Part 2: The Future as Progress

Technology continues to advance on all fronts. Here are some reports on what may be in store for us in the years ahead.

30 **The Automated Office**
by Hollis Vail
Speeding up office work and making it possible to work at home.

34 **Architecture Beyond 2000**
by Roy Mason
New materials and techniques may result in buildings that are almost beyond imagining today.

46 **The Oceans in Our Future**
by Larry Booda
The "wet frontier" is beckoning people everywhere.

57 **Tomorrow's Aviation: The Sky Won't Be the Only Limit**
by Jerry Richardson
Air officials have begun a major effort to forecast possible developments in aviation.

66 **Space Colonies: The High Frontier**
by Gerard K. O'Neill
Human beings may start living in space colonies.

75 **The Preventive Psychiatry of the Future**
by Stanley Lesse, M.D.

81 **Medicine in the Post-Physician Era**
Two doctors look at the way medicine may be practiced in the coming years.

Part 3: The Future as Challenge

If we face emerging problems squarely, we may be able to solve them or at least soften their impact.

86 **The Coming Energy Transition**
by Denis Hayes
Exhaustion of petroleum and natural gas supplies will force mankind to turn to other sources of energy.

Declassified and Approved For Release 2013/04/17 : CIA-RDP90-00530R000802010001-5

Declassified and Approved For Release 2013/04/17 : CIA-RDP90-00530R000802010001-5

93 **Population and Education**
by Joseph F. Coates
How demographic trends will shape the U.S.

99 **Work in the Year 2001**
by William Abbott
The nature of work is changing rapidly due to a variety of interacting trends.

105 **America's Educational Futures: 1976-2001**
by Harold Shane
Distinguished citizens and educators view the years ahead.

111 **Prolongevity: The Extension of the Human Life Span**
by Albert Rosenfeld
Some scientists are optimistic that the human life span can be extended to 200 or more years.

116 **The Pleasure Bond: Reversing the Anti-Sex Ethic**
by Robert T. Francoeur and Anna K. Francoeur
Sex in the future may be governed by a new ethic emphasizing pleasure, caring, and mutual growth.

Part 4: The Future as Invention
"Inventing the future" has become a popular phrase among futurists. They do not see the future as something that just happens to people; instead, people create the future by deciding what they want and then working to achieve it.

122 **Recycling People**
by Fred Best
Education now comes at the beginning of a person's life, work during the middle years, and leisure at the end. Distributing them more evenly through a lifetime might make more sense in today's fast-changing world.

134 **Appropriate Technology: What It Is and Where It's Going**
by Rowan A. Wakefield and Patricia Stafford
The current "appropriate technology" movement is challenging traditional concepts of economic development.

139 **Social Inventions**
by D. Stuart Conger
Social inventions can solve social problems just as mechanical inventions can solve technological problems.

149 **Hawaii's Lessons for the Future**
by Bob Krauss
Future shock? Limits to growth? An island people long ago found ways to deal with them.

Conclusion

156 **Towards a Philosophy of Futurism**
by Edward S. Cornish
Futurists are developing a unique perspective on the world.

159 **For Further Reading**

Multinational corporations own the world, pollute the athmosphere, and you can see those radiation towers so needed to keep the mind control of the masses going.

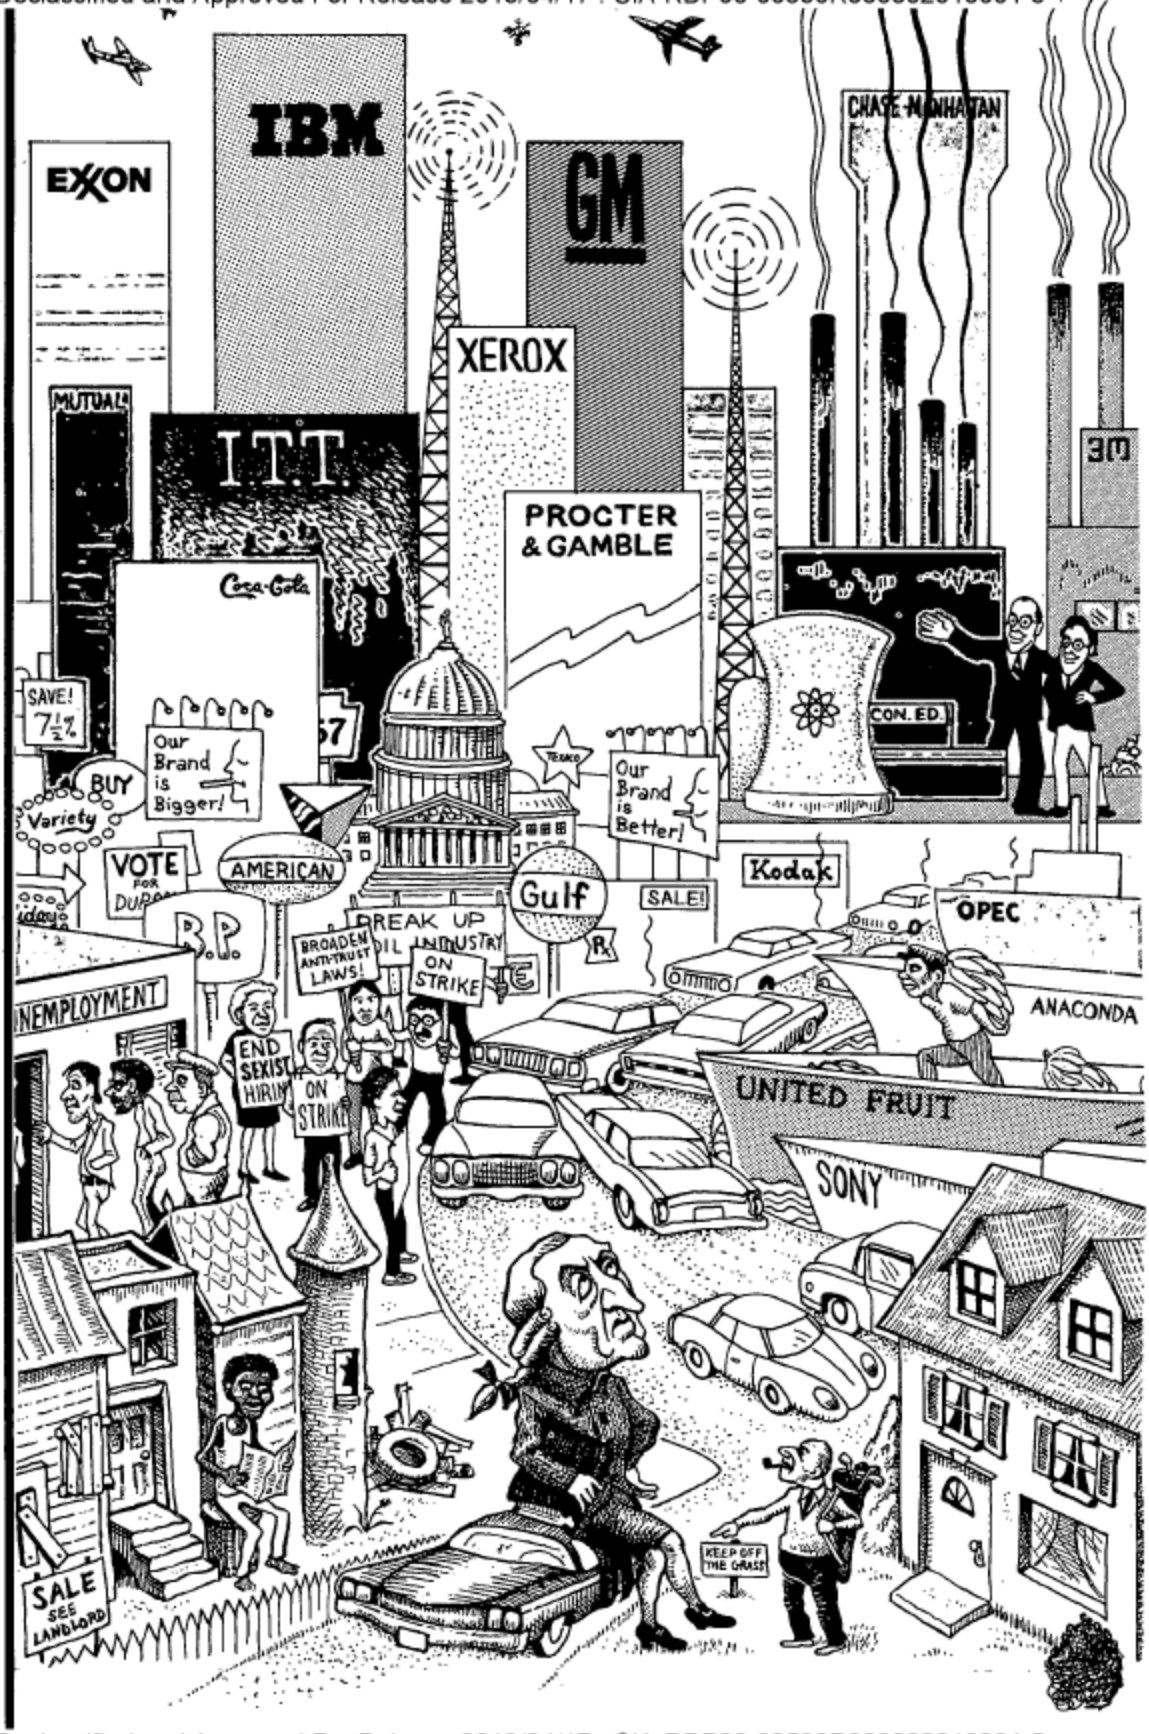
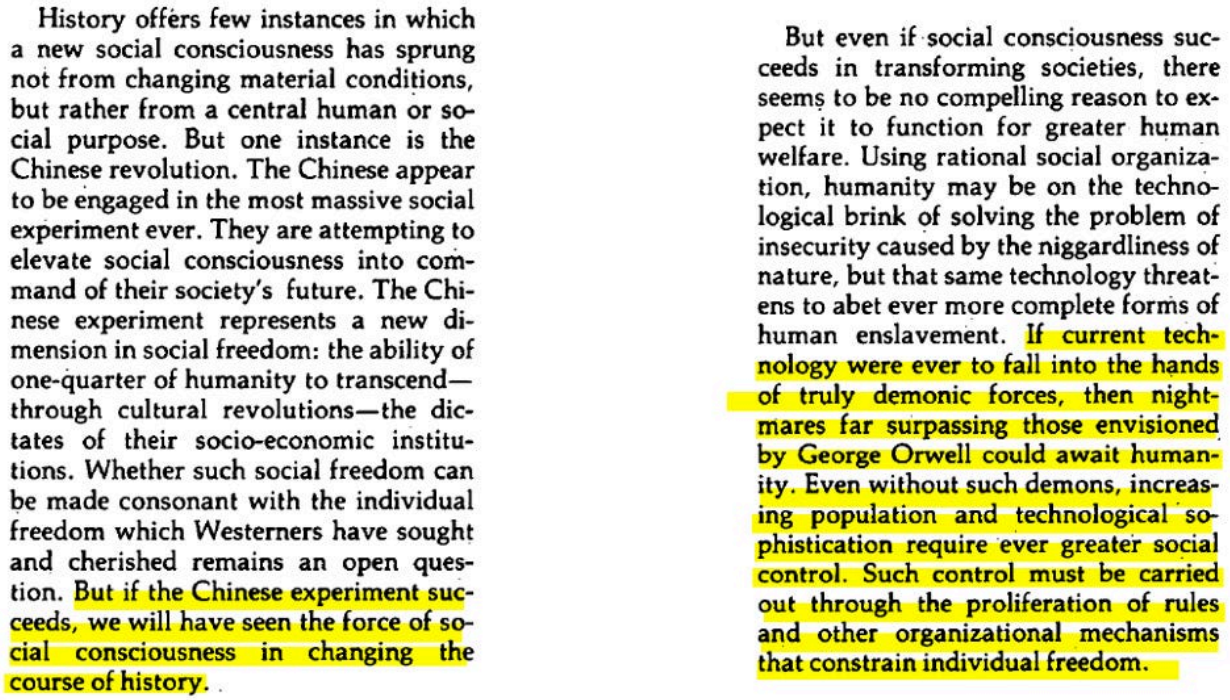
Adam Smith's Vision



Drawing: Tom Chalkley

Declassified and Approved For Release 2013/04/17 : CIA-RDP90-00530R000802010001-5

Technocrats love the Chinese Communist Totalitarian Regime and consider it the role model for global human enslavement. They are aware of truly demonic forces that make Orwell's visions kindergarden play. Technocrats want to control freedoms of humanity.



History offers few instances in which a new social consciousness has sprung not from changing material conditions, but rather from a central human or social purpose. But one instance is the Chinese revolution. The Chinese appear to be engaged in the most massive social experiment ever. They are attempting to elevate social consciousness into command of their society's future. The Chinese experiment represents a new dimension in social freedom: the ability of one-quarter of humanity to transcend—through cultural revolutions—the dictates of their socio-economic institutions. Whether such social freedom can be made consonant with the individual freedom which Westerners have sought and cherished remains an open question. But if the Chinese experiment succeeds, we will have seen the force of social consciousness in changing the course of history.

But even if social consciousness succeeds in transforming societies, there seems to be no compelling reason to expect it to function for greater human welfare. Using rational social organization, humanity may be on the technological brink of solving the problem of insecurity caused by the niggardliness of nature, but that same technology threatens to abet ever more complete forms of human enslavement. If current technology were ever to fall into the hands of truly demonic forces, then nightmares far surpassing those envisioned by George Orwell could await humanity. Even without such demons, increasing population and technological sophistication require ever greater social control. Such control must be carried out through the proliferation of rules and other organizational mechanisms that constrain individual freedom.

Note the prominent 5 G tower drawn in 1978 - now actualized by the 5 eyes intelligence network grid and the global 5 G surveillance through biosensors. This also included HAARP ELF mind control. Combine that with the brain computer interface via the COVID19 bioweapon self assembly nanotechnology and the smart dust sprayed via geoengineering and you have perfect zombification or Cyborgification of humanity, that willingly stand in line and worship the political figures as Gods.

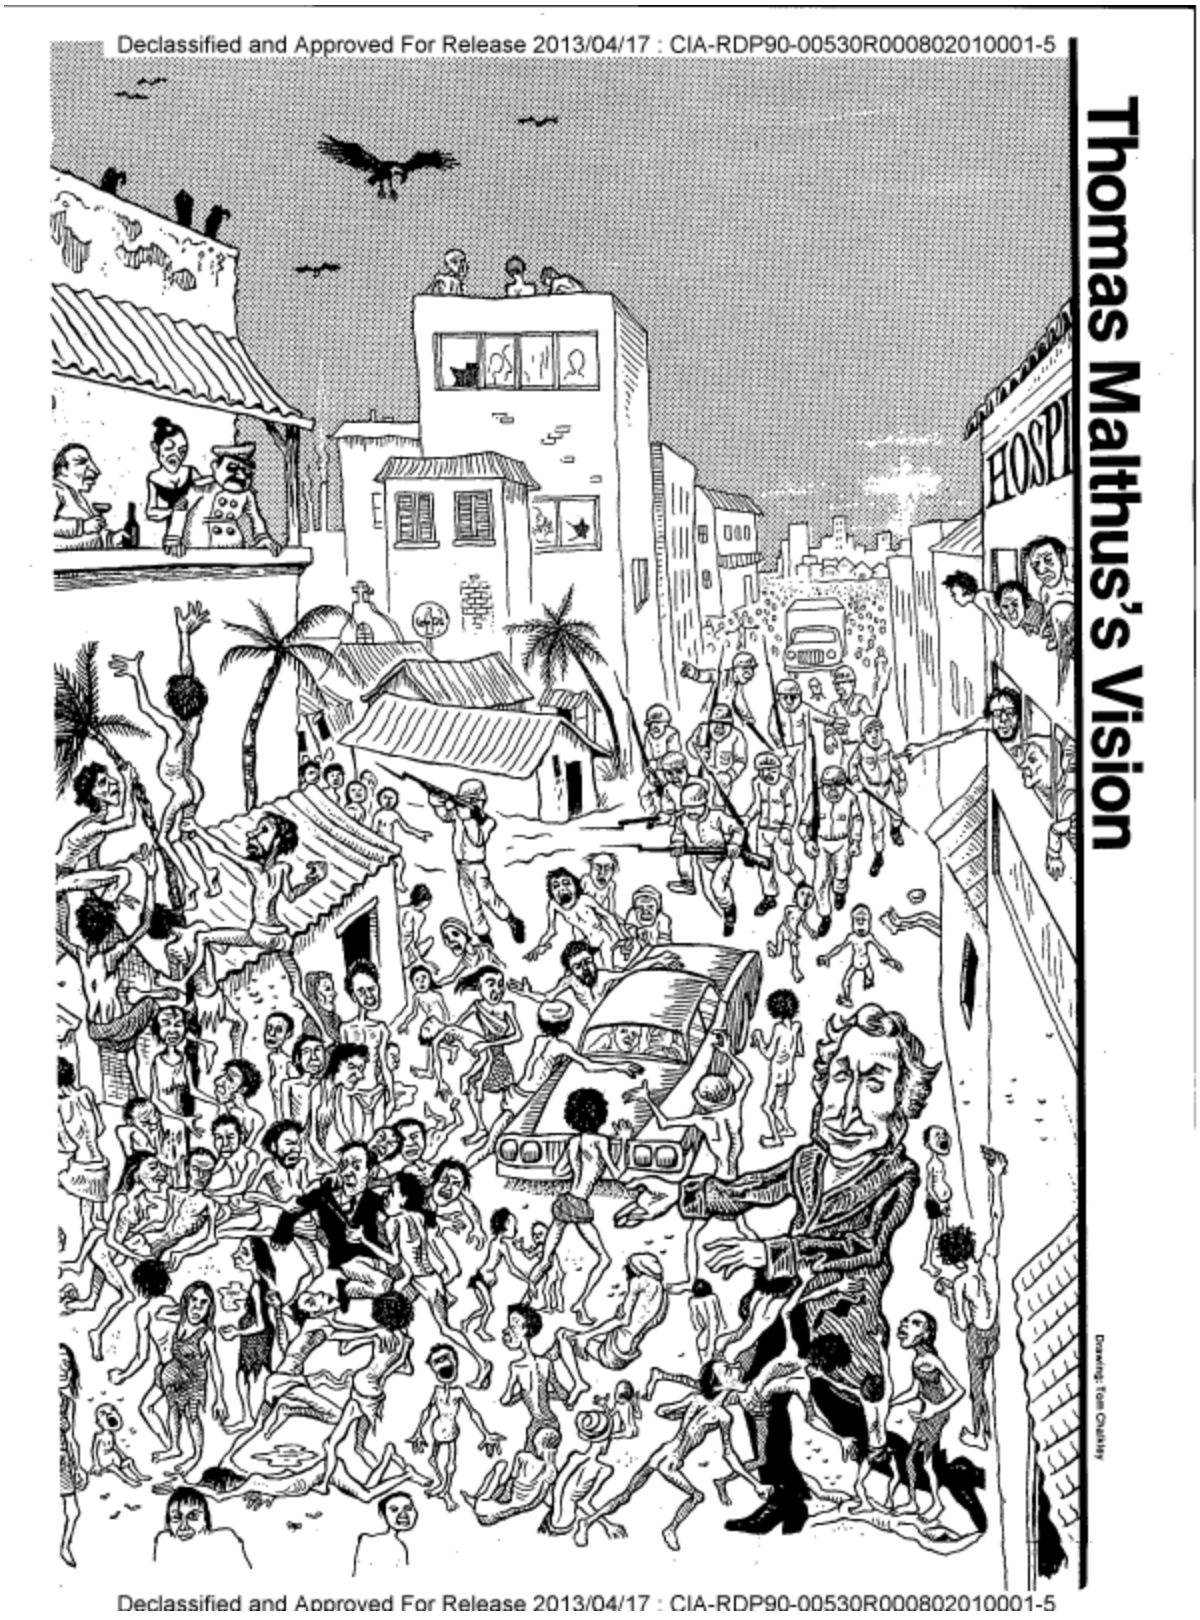
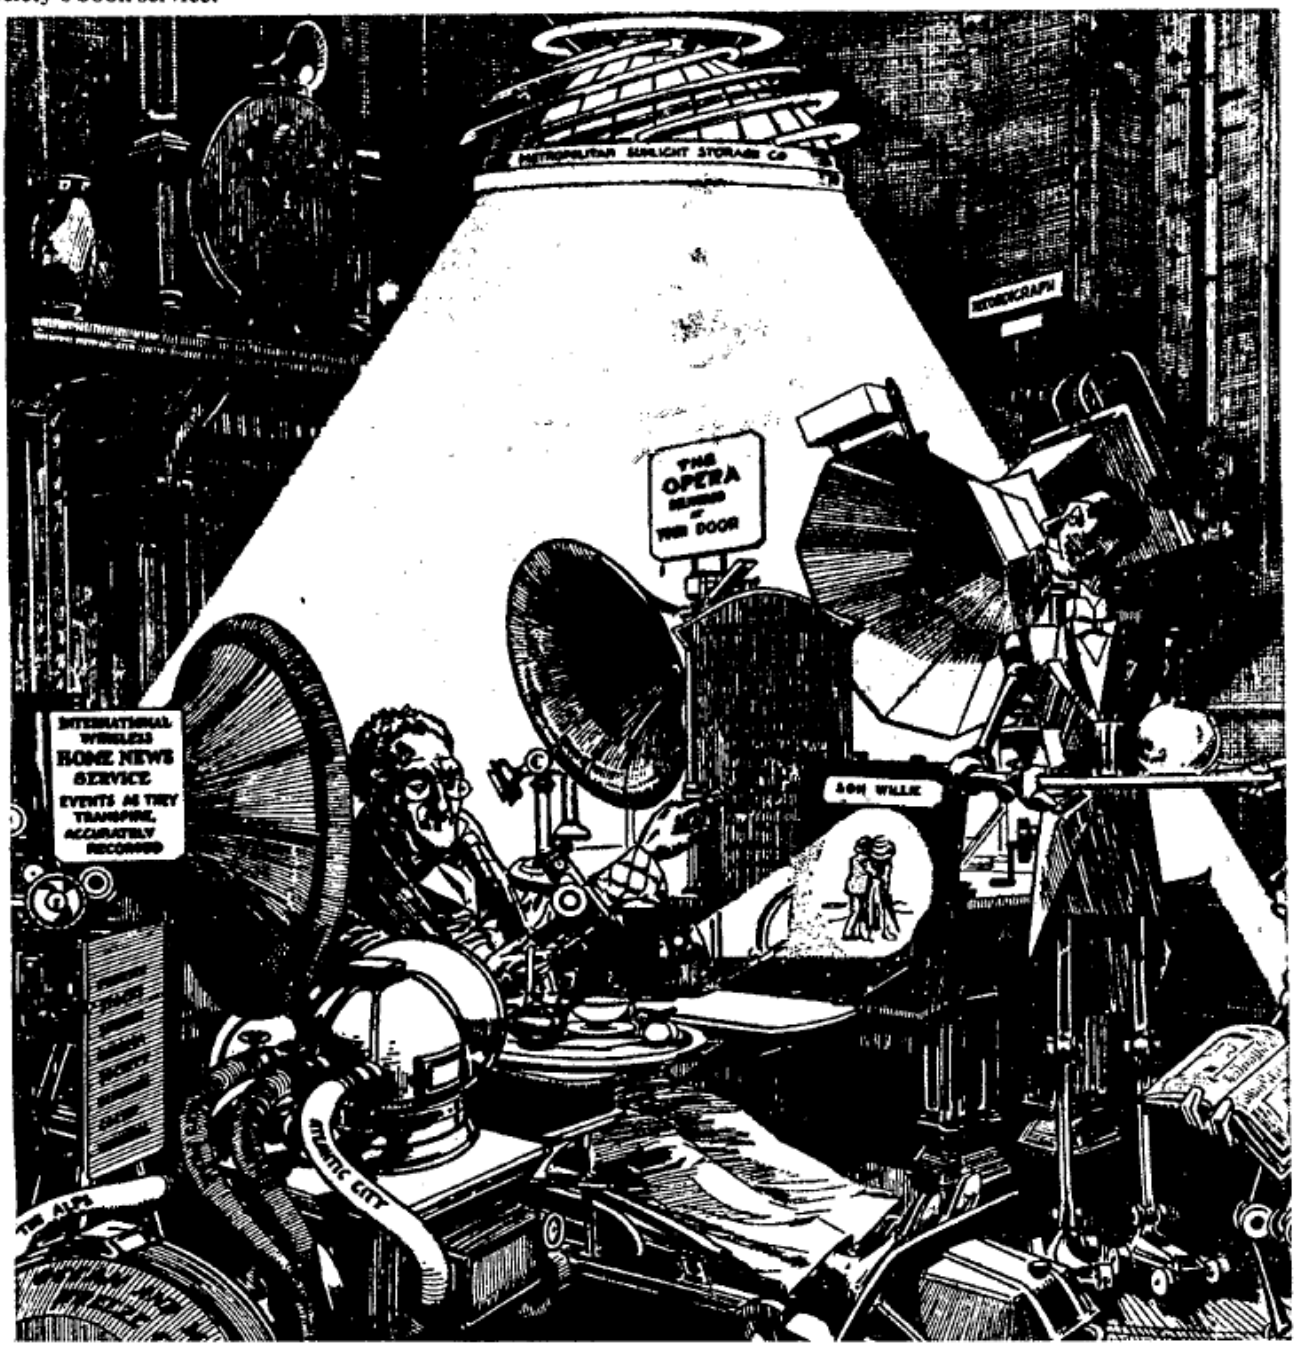
Humans are seen as slaves to the oversized Technocrats, the real rulers of the world.



In 1911 the living room of of the future was conceptualized as digital entertainment of course for mind control purposes. The more stupid you get by being programmed from mindless soap operas, the real party of world dominance can continue behind the people's back. By having a perpetual calendar of the future, the construction of that

reality is continually reinforced. Why do you think the WEF has the brightest economists, scientists, engineers, physicists, doctors and they call themselves disruptors of the status quo and futurists? Because regardless of who is in power in governments they control the economic infrastructure of all countries and its future technological progress. So their agenda carries on. As Mayer Amschel Rothschild **said: "**Permit me to issue and control the **money** of a nation, and I **care not who** makes its laws." In other words, money owns all the politicians, lawyers, judges anyhow, exactly as we have seen displayed in our own country for so long.

Living room of the future: A 1911 conception. Four years before Charles Steinmetz's article was published, artist Harry Grant Dart offered this view of things to come. The gentleman in the drawing pushes a button on his Observiscope to see his son Willie (revealed in an amorous pose). A wind-up mechanical butler on wheels waits with a decanter and glass. Other amenities include air from Pike's Peak, Newport, and Atlantic City as well as stored sunlight. This drawing, from the New York Public Library, appears in the PERPETUAL CALENDAR OF THE FUTURE (1975-2001) prepared by Future Research Associates. The calendar, which can be used up to the year 2001, is available for $2.95 from the World Future Society's book service.



Smart cities were already in planning, and only electric cars and bicycles allowed:

Automobiles in Cellars

FOR local transportation the majority of people are now dependent upon rapid-transit systems or trolley cars. These require subways, elevated structures in the heart of the city, rails in most of our streets and almost an endless amount of noise. The automobile is very convenient. When fires are not allowed within city limits electric automobiles, bicycles and tricycles will be developed, and, on account of the low price, will be available to almost everyone.

These electric cars will be kept in our cellars or basements, where now we keep the furnace and the coal and ashes. We shall have a driveway going right under the house, and this will make a convenient place to store our cars in, from the big family or touring car to the small bicycle or tricycle. This will eliminate the need for garages. While the cars are in the basement they will have their batteries charged.

Carbon and electrical consumption tax was already in planning and if you think Klaus Schwab's "Build back better" was original, think again. You will "own nothing and be happy" is as old as the hills in Technocratic literature.

Electricity Cost by Tax, Like Water

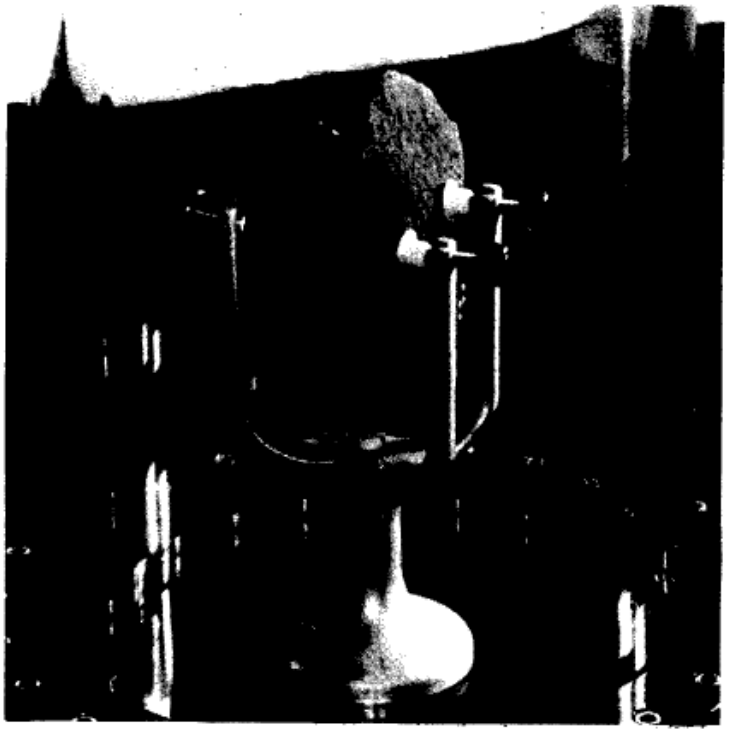
ELECTRICAL power will be used so generally that it is very likely the cost will be on the basis of a tax, like our water tax. For example, so much a plug, as we are now charged so much a faucet. It will be very cheap and it will not pay to install meters and have them read and keep the accounts in the offices of the electric companies, or in the Government building if the power is being generated by the municipality or the Government.

Today water is used universally and no one would think of making a charge to a friend or even a stranger for any amount of it. It will be the same with electricity. If you make a call in your electric vehicle the vehicle will be run into the friend's basement and the batteries will be charged while you are making your call. It won't make any difference whether you get your electric current from your friend's plug or from the plug in your own home—the tax will remain the same.

We Shall Live Easier but Better

WHILE making life very much more pleasant, easy and worth living, naturally the question will be raised: "Will not the human race degenerate because of the removal of so many means of resistance?" I think the contrary will be true. In the first place, human nature will always demand a change, and for recreation we shall go out into the wilderness and live like our ancestors, the same as many of us do now when we enjoy camp life; but even in camp now we have very many modern conveniences to make the life easier.

The process of future predictions is constantly assessed, for some things occur faster, others take longer. The futurist keep track of “time” and manifestation to adjust their efforts continually.



Space exploration has occurred much more rapidly than Sir George Thomson forecast in 1955, reviewer Prehoda reports. Except for timing, however, Thomson's astronautics forecast was quite accurate. Rock from the moon was displayed at the Smithsonian Institution in Washington, D.C., in 1970, far sooner than Thomson imagined. Still in the future are large space bases like the orbiting laboratory shown in an artist's conception at right. Photo: NASA

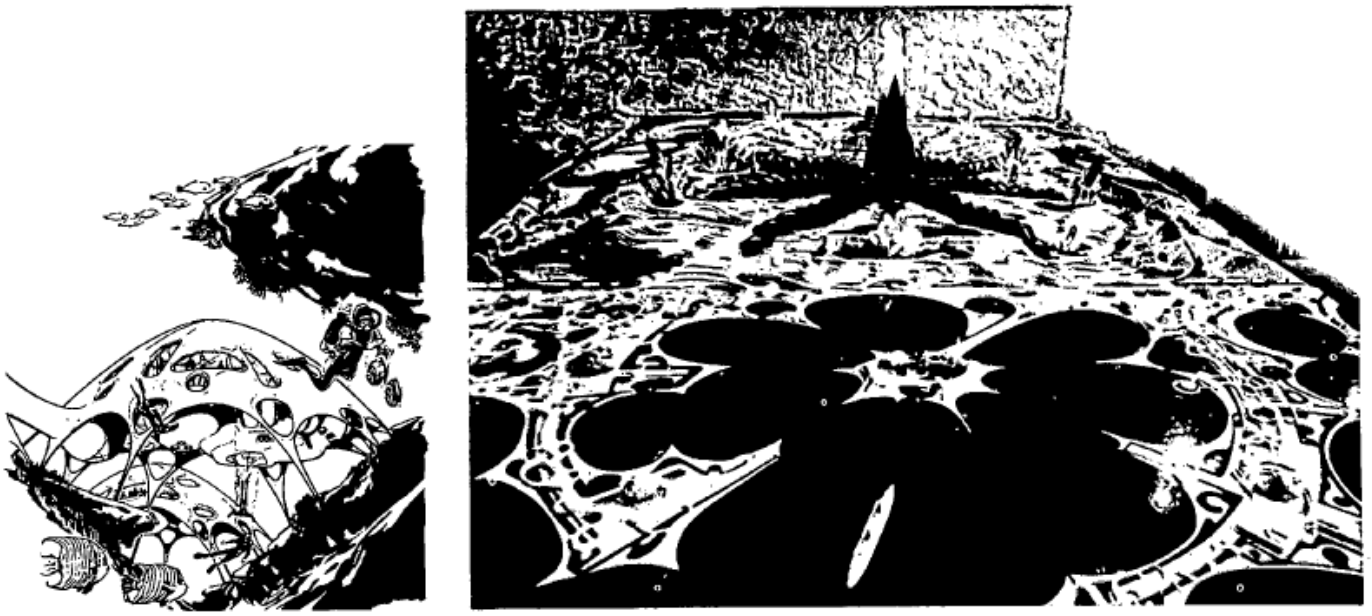
In 1978 automation of workplaces and work from home that was pushed via the COVID19 plandemic already existed.

Bringing the Office into the Home

In recent years, many offices have moved the job of typing away from the immediate office area to separate "word-processing centers" that utilize remote dictation and automatic typewriting equipment. Since it is now clear that the typing function can be performed efficiently at a location physically removed from the author and from the site of other office activities, tomorrow's word-processing centers could easily be in one's own home. Consider the following scenario:

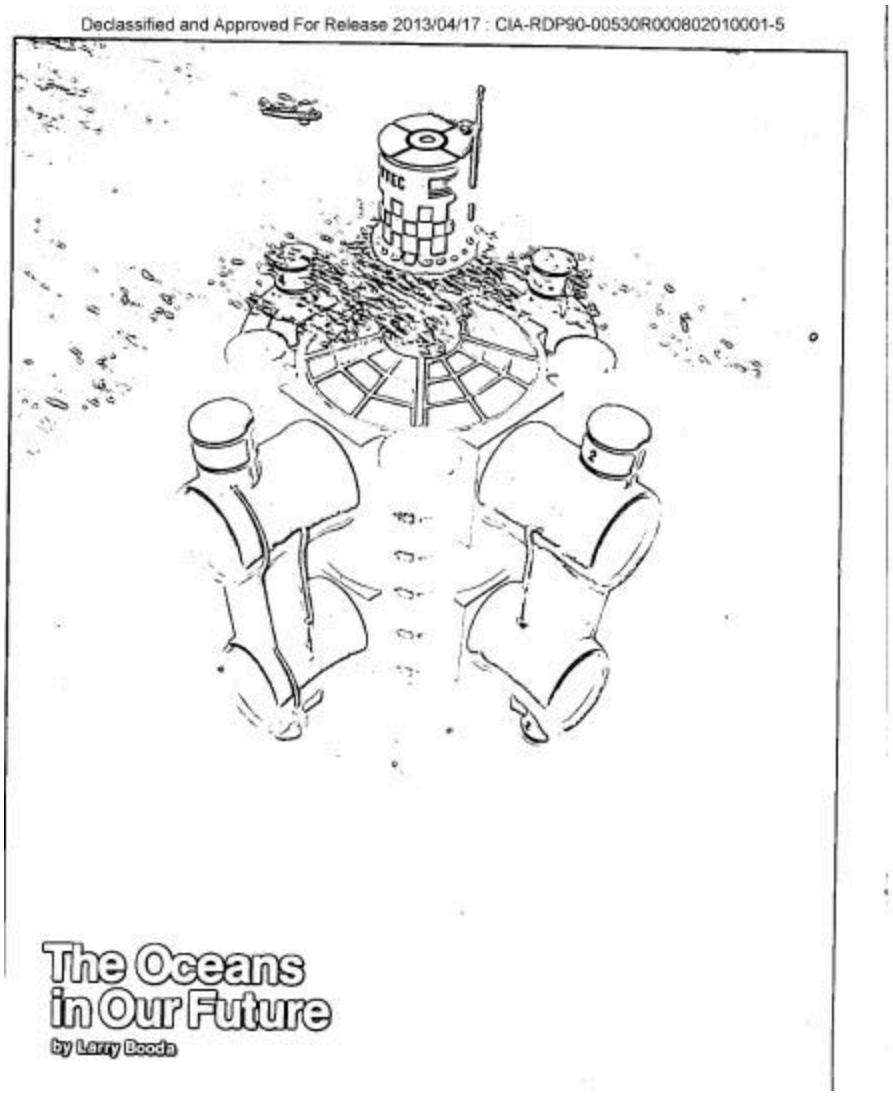
Automation has already revolutionized the factory. Now it is about to revolutionize the office—freeing workers from rigid schedules, busy work, and the aggravations of commuting.

How about underwater dwellings and Ghislaine Maxwell's and cohorts obsession with populating the Ocean floor. Original Idea? No, its a technocratic plan, decades old.



Underwater structures such as this village (left) designed by Jacques Rougerie and colleagues in Paris would facilitate research in marine biology as well as provide vacationers with an exciting locale. Increasing population densities on land may provide a major impetus for moving underwater in some coastal areas. Photo: Courtesy of Jacques Rogerie

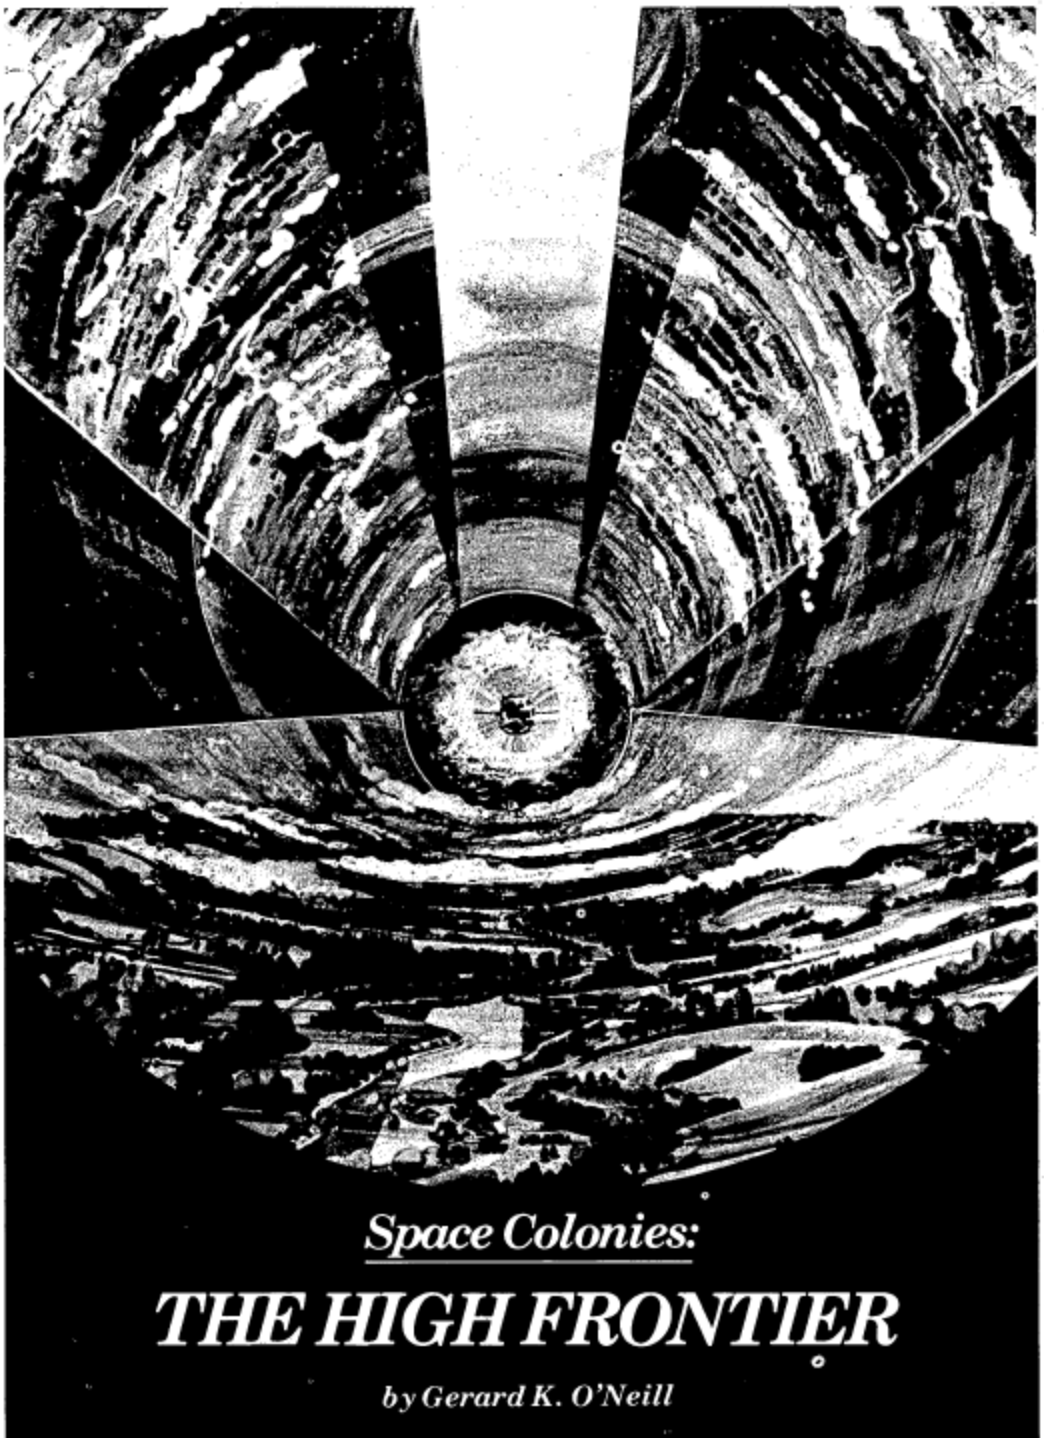
Marine structure (right) proposed by Pierre-Andre Martin of Sete, France, would permit the expansion of urban and port facilities over adjacent water areas. Photo: Courtesy of Pierre-Andre Martin



How about Elon Musk's Colonize Mars that President Trump just endorsed?

Yes, technocratic plan, long in the making:

Declassified and Approved For Release 2013/04/17 : CIA-RDP90-00530R000802010001-5



Space Colonies:

THE HIGH FRONTIER

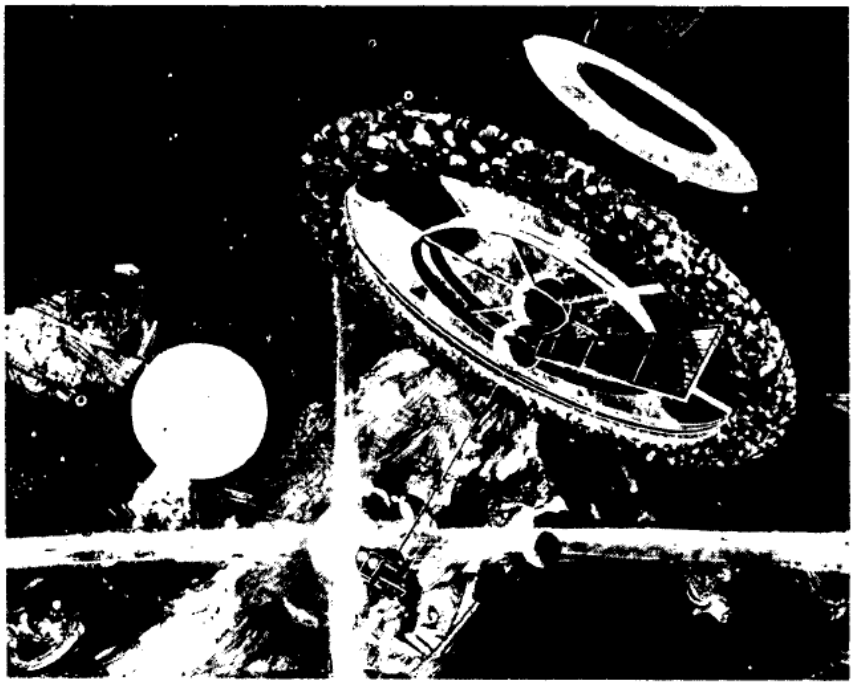
by Gerard K. O'Neill

An earth-like space colony could be orbiting our world by 1990, says a Princeton University physicist. The colony's 10,000 inhabitants would enjoy green plants, animals, plains, valleys, hills, and streams. The colonists would pay off the cost of building their extraterrestrial home by manufacturing satellite solar power stations, which would supply cheap, virtually inexhaustable power to the earth.

Oh wait, if in 1978 they were talking about more advanced technologies than space shuttles, could it be that in the secret space-programs they already had antigravity propulsion? And they are telling you, UFO's don't exist. Space colonies have long been actualized and they have already been to Mars, just as neuralink was not the first brain chip implanted in humanity.

Elon Musk is a technocratic posterchild. I don't know what exactly he means by him saying he is pro human while pushing for humanoid robots, automated vehicles, brain chips and more. Don't get me wrong I think it is great what he is doing, but the technocratic plan also says we no longer need governments by the people, let the technocrats rule nations.

Elon's technocratic father, Errol Musk
said: **"If you are a Technocrat, are you doing all that you can to extend** the Organization and discipline yourself to meet its objectives?"



The wheel-like design shown above (and also on the cover) might be used for the first space colony. The mirror floating above the colony reflects sunlight into the ring mirrors below, which reflect it through 100-foot strip windows into the colony's interior for light and agriculture. Above the core sphere are communications and spacecraft docking facilities. Long rectangle in foreground is a heat radiator. The facility below the colony is the manufacturing area where lunar ore is melted with solar power. Lower central sphere is the original "construction shack" for the colony.

Drawing: NASA

available in space.

Space Colonies: The Basic Plan

The central ideas of space colonization are:

1. To establish a highly-industrialized, self-maintaining human community in free space, at a location along the orbit of the moon called L5, where free solar energy is available full time.

2. To construct that community on a short time scale, without depending on rocket engines any more advanced than those of the space shuttle.

3. To reduce the costs greatly by obtaining nearly all of the construction materials from the surface of the moon.

4. At the space community, to process lunar surface raw materials into metals, ceramics, glass, and oxygen for the construction of additional communities and of products such as satellite solar power stations. The power stations would be relocated in synchronous orbit about the earth, to supply the earth with electrical energy by low-density microwave beams.

5. Throughout the program, to rely only on those technologies which are available at the time, while recognizing and supporting the development of more advanced technologies if their benefits are clear.

The two key factors that make space colonization an economically sound idea are solar energy and lunar

Precision medicine was already planned, we are a couple decades behind. Post physician healthcare means automated telemedicine plus inside the body diagnostics - we know that is done via biosensors today. Remember this was written in 1978.

Health Sciences in the Year 2000

Several current trends point to the development of cybernated systems in the health sciences and the consequent displacement of skilled personnel who are now considered indispensable. The trends include:

1. Marked acceleration in the development of sophisticated measuring equipment and computers that can readily be adapted to medical diagnostics.

2. Pressure from a mushrooming population for more extensive medical care facilities. Projected demands far exceed the projected capacities to train medical and paramedical personnel of the type with which we are now familiar.

3. Current educational trends encouraging medical students to specialize in the early years of their training, thus eliminating the traditional practice of educating the young physician to be a generalist before he becomes a specialist.

4. The crowded, group-oriented, highly automated world that seems destined to become a reality in the not-too-distant future. In this environment, patients will probably not object to a more impersonal type of health-science care.

Declassified and Approved For Release 2013/04/17 : CIA-RDP90-00530R000802010001-5

Projected Developments Related to Medicine

The following forecasts are excerpted from *The Post-Physician Era: Medicine in the 21st Century* (Wiley-Interscience, New York, 1976). Author Jerrold Maxmen believes that there is at least a 50% probability that each of these developments will occur by the dates indicated.

Year	Communication and Computer Technology	Biomedicine and Therapeutics	Education and Occupations	Miscellaneous
By 1980	Establishment of TV network for MDs Wide use of computers for hospital record storage and data retrieval Routine use of cable TV for medical conferences	Development of useful tissue adhesives to replace sutures Development of tests for rapid diagnosis of viral diseases General availability of home diagnostic kits for urine and fecal examinations	Pharmacist's education stressing his consultant role Unrestricted medical license granted only after completion of residency Ombudsmen widely used in hospitals and clinics	Laboratory creation of protein for food by *in vitro* cellular processes Enactment of national health insurance covering 75 percent of medical costs Noncarcinogenic cigarette
By 1985	Wide use of videophones in hospitals Wide use of computers for medical history taking Portable telephone widely available	Artificial heart implantation Chemical synthesis of specific antibodies Laboratory solution of immunologic rejection problem Development of reliable chemical tests for psychotic disorders	Use of teaching machines that respond to a student's answers and to his physiologic state (tension) Virtual obsolescence of the general practitioner The "classical" lecture system ended in 40 percent of medical schools by teaching machines, closed circuit TV, interactive TV, and audio-visual aids	Decriminalization of marijuana Red Cross a semi-public agency in most nations Government-established standards for medical computers
By 1990	Frequent use of "telemedicine" Wide use of computers to prescribe medications Some people able to have daily checkups of body	Development of artificial colon Development of safe chemical means to reverse effects of arteriosclerosis Chemical cure for schizophrenias Development of anticancer vaccines Wide use of tests in children that will reliably predict their	Wide use of professional nurses to deliver primary care	Failure to consult a computer considered grounds for malpractice suit Water and air pollution problems largely diminished Chemical synthesis of cheap nutritious food

The list goes on. This document contains 193 pages. You can read about the planned future - but understand this, technocrats do not care about humanity.

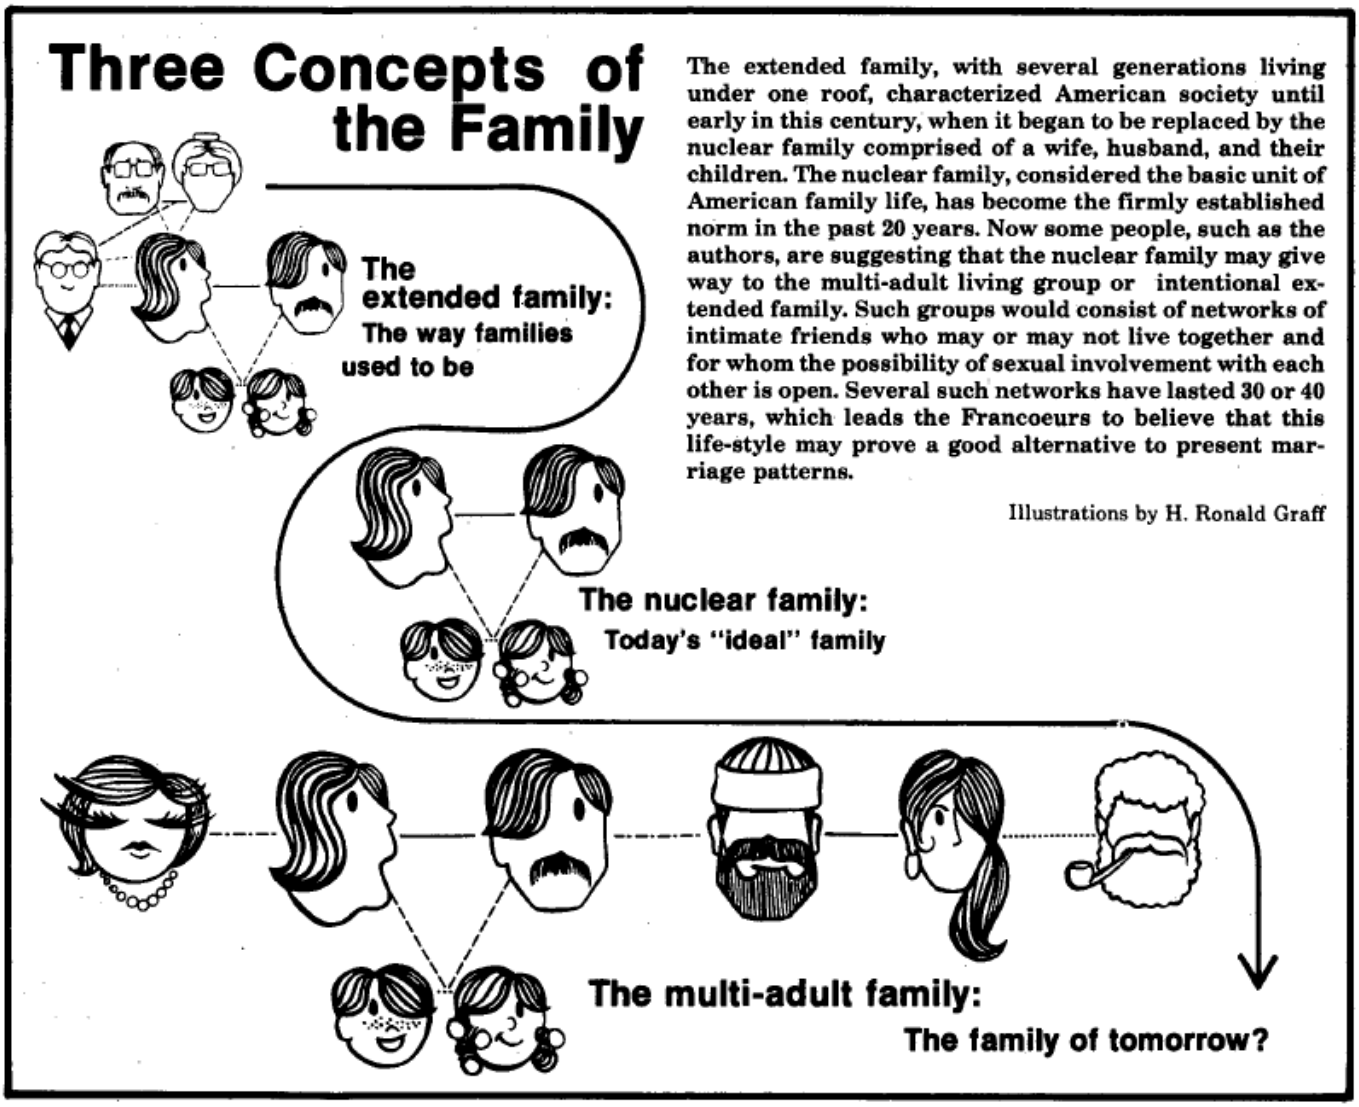
Jeffrey Epstein was a technocrat, collecting scientists like he did underage girls to trap the political, scientific and economic future of our nation. Remember these perverts who are inspired by Satanism as we have heard from Illuminati Insider Leo Zagami, are about open marriage and pedophilia.

The Pleasure Bond: Reversing The Antisex Ethic

by Robert T. Francoeur and Anna K. Francoeur

Western society is on the verge of developing a new sexual ethic based on pleasure, caring, and mutual growth, say two experts on marriage and sex. They predict that, despite antiquated laws and mores which uphold monogamy and fidelity, a "pleasure bond" ethic of non-reproductive sexual relationships outside of marriage will fundamentally alter society, the family, and values in the future.

Declassified and Approved For Release 2013/04/17 : CIA-RDP90-00530R000802010001-5



Rituals of Satanic magic happen around the time of maturity of children. They want to share sex with their children.

Removing Taboos from Sex

Why can't we have a ritual to celebrate a girl's first menstrual flow, or a boy's first wet dream? Why can't we parents share with our children the anxieties, insecurities, and joys we find in sex? Why shouldn't a son or daughter feel free to discuss his or her hesitant explorations of sexuality with a parent?

While many of these perverts want to normalize pedophilia, which is a long time satanic practice, I propose that as a society we should institute the death penalty for those who rape a child. There is no greater crime then to rob a child of their innocence and the damage done to their soul is unfathomable. There is no greater crime to the future of humanity, than to rape a child, especially in Satanic rituals.

That alone would clean out much of the deep state players in politics, law enforcement, intelligence, and churches. Imagine if instead of the cover up of the rapists by the Vatican we would put them on death row? Maybe going to church for a child would become safe again, and not be a nest of preditors ready to assault. Billions of dollars have been paid by the Vatican for this coverup of tens of thousands of raped children. That does not include the raping of each other and the nuns. As of October 2024 sexual assaults continue as always:

Catholic Church Must Do Better Job on Compensating Abuse Victims, Says Vatican Commission

> "It doesn't focus on the central and devastating realities: that children in the Catholic Church are still being sexually assaulted by clergy, and that universal church law still allows these priests to be reinstated if certain conditions are met," she told Reuters.

What kind of a society would have then?

A civilization that preys on their own children is doomed to destruction.

Technocracy has been long planned and marches on. Read their manuals - you can find their plans everywhere. This is the Silicon Valley elite that supports our administration, so watch carefully.

The editor of the magazine, Edward Cornish also wrote the book “Futuring - The Exploration of the Future”. I also recommend the books by Futurist James Canton “ The

Extreme Future", "Technofuture", "Future Smart" - you can read about how nanotechnology will replace everything about humans and push us into the post human future - unless we resist and start to take serious part of the conversation on how we desire our future to be.
